Sample Scripts for Data Collection

Recruited participants will arrive at the testing station and be greeted by the reception you have set up for your study. At reception, participants will read through and sign any consent forms associated with your study.

Before collecting data, you should prep your participants with brief information about the modalities involved, study flow, what to do if an issue arises, etc. While your consent form will cover all important legal implications and information on modalities, a brief introduction before setting up participants is useful to allow participants to feel comfortable and ready to move forward with the study. Below are some sample scripts that can be tweaked for your own use when prepping your participants for study setup and data collection.

Video Ad

"Thank you for participating in today's study. For today's experience, you will be ***watching a series of videos and answering questions about them.*** *The modalities utilized in today's study are* ***GSR, ET, and FEA.***

The GSR device is a device that monitors your sweat activity and is worn like a wristwatch. It is similar to FitBit. This device is completely passive - you will not feel anything. There will also be cameras attached to the viewing screen that will be monitoring your eye movements and facial expressions. Do you have any questions?"

> Set participants up with equipment

"When I hit play, the eye tracking calibration will begin. Please set yourself up in a comfortable position that you will be able to stay in for about 20 minutes. Once you are calibrated, we ask that you do not move too far out of that spot as it will throw off your eye tracking calibration. Please follow the dot with your eyes when I hit play."

> Reminders before testing

"*When I hit play, the content will begin. Each video will advance automatically. Please view the content as you normally would.*

During the experience, we have a few simple rules we ask you to follow:

- *Please do not move your chair or the computer monitor after we calibrate you.*
- *If you get any error messages on screen or something seems to go wrong, please raise your hand and we will come in to assist you."*

Mobile Gaming

"Thank you for participating in today's study. For today's experience, you will be ***playing a mobile game.*** *The modalities utilized in today's study are* ***EEG, GSR, FEA and ET.***

The GSR device is a device that monitors your sweat activity and is worn like a wristwatch. It is similar to FitBit. The EEG device is a headset that monitors your brainwaves. These devices are completely passive - you will not feel anything. Lastly, there will be cameras attached to the viewing screen that will be monitoring your eye movements and facial expressions. We will start by hooking you up to these sensors and then we will explain the gameplay."

> Set participant up with EEG and GSR devices

"When I hit play, the eye tracking calibration will begin. Please set yourself up in a comfortable position that you will be able to stay in for about 20 minutes. Once you are calibrated, we ask that you do not move too far out of that spot as it will throw off your eye tracking calibration. Please follow the dot with your eyes when I hit play."

> Explain gameplay

"*Today, you will be playing a mobile game. The instructions are simple and will appear when you start the game. There will be a number of ads embedded throughout your gaming experience. Please interact with these as you normally would.*

Once the game has finished there will be a 'thank you for participating screen' Please wait on that screen until we come back in. We will wait for everyone to finish the game before we come back and move you onto the survey."

> Final Reminders

"*During the experience, we have a few simple rules we ask you to follow:*

- *Please do not move your chair or the computer monitor after we calibrate you.*
- *If you get any error messages on screen or something seems to go wrong, please raise your hand and we will come in to assist you."*
