Export: Exposure Summary

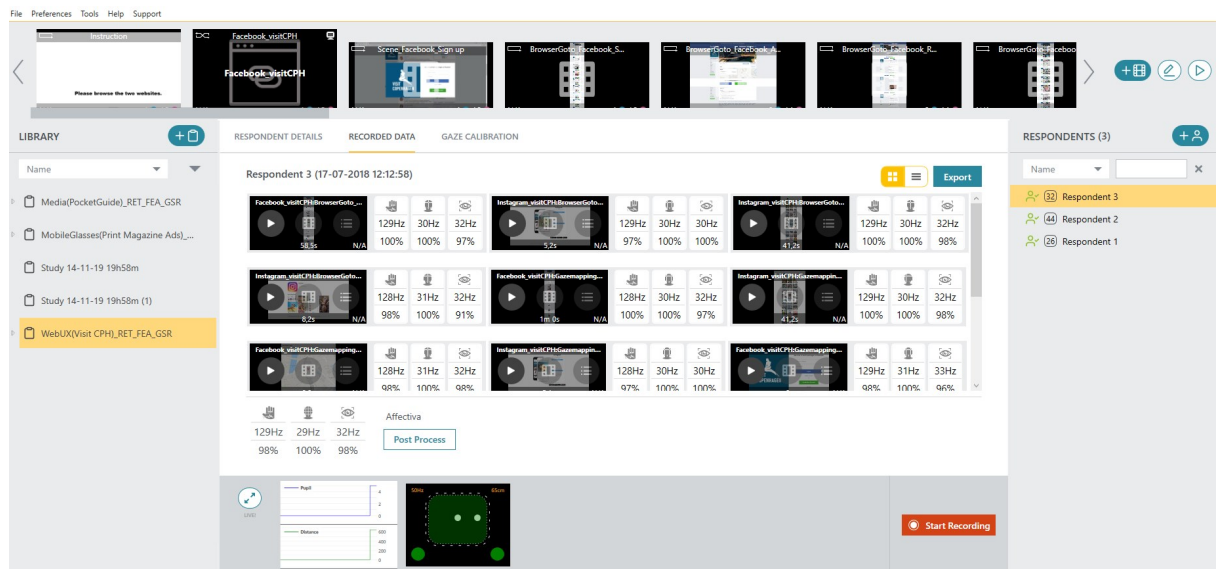

The following article will explain the purpose and functionality of exposure summary.

The exposure summary can be calculated from the study level of recorded data. If you do not see a Calculate button underneath the collective stimuli representation, or if you do not see the calculate button for exposure summaries, then it has already been calculated.

A new exposure summary needs to be calculated when the study contains new data.

Exposure summary can also be accessed from Respondent level.

The exposure summary enables the interface to show data quality % and the sample data recorded. This includes on a study level, respondent level, or individual stimuli level.

The exposure summary can also be exported as a CSV file. Seen in the image above on the right hand corner of the central interface.

	A	B	C	D	E	F	G
1	#Study Name : WebUX(Visit CPH)_RET_FEA_GSR						
2	#Study Date : 17-07-2018 14:10:22						
3	Stim_Name	Shimmer Shimmer GSR/EDA_SamplingRate	Shimmer Shimmer GSR/EDA_Quality	Affectiva AFFDEX_SamplingRate	Affectiva AFFDEX_Quality	Eye tracking_SamplingRate	Eye tracking_Quality
4	BrowserGoto_Facebook_Start	129	100	30	100	32	97
5	BrowserGoto_Instagram_Get	129	97	30	100	30	100
6	BrowserGoto_Instagram_Start	129	100	30	100	32	98
7	BrowserGoto_Instagram_iTunes	128	98	31	100	32	91
