Export: Survey data

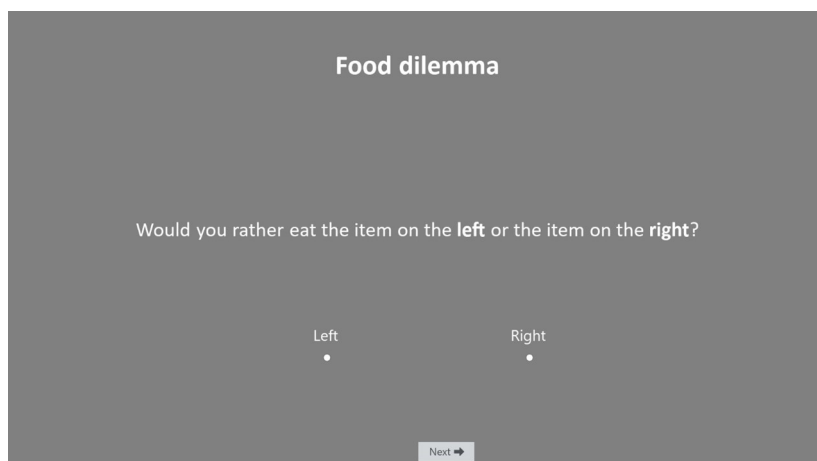

This help center article explains how to export survey data.

In this help center article:

- What are survey slides?
- What are the options for exporting survey data?
 - Survey data per respondent
 - Full survey response
 - Survey statistics
- How to export the files?

What are survey slides?

One of the stimulus types supported by the iMotions software is the survey slide. These survey slides are created in the survey editor, and may include scales, multiple-choice questions, free responses (typed in by the respondent), and button presses.

What are the options for exporting survey data?

If a study included such survey slides, it is possible to retrieve the results through the following export options:

- **Survey data per respondent**

The option *Survey data per respondent* saves a .txt file per survey slide; these export files list the answers of the respondents included in the analysis to the questions asked in the particular survey slide.

#	A	B	C	D	E	F	G	H	I
1	Multiple Choice Matrix								
2	Question ID	Choice							
3	Headline	Would you rather eat the item on the left or the item on the right?							
4	Allow multiple choice	NO							
5	Number of Categories	2							
6	Number of Questions	1							
7	Attached to stimulus	Slide1							
8									
9	LABEL ID	LABEL TEXT	LABEL VALUE						
10	Label1	Left	1						
11	Label2	Right	2						
12	QUESTION ID	QUESTION TEXT							
13	Question1	Food choice							
14									
15	STUDY	RESPONDENT	GENDER	AGE	GROUP	Question1.LABELID	Question1.LABELTEXT	Question1.LABELVALUE	Question1.TIMING
16	---	R1	MALE		38 ---	Label1	Left		
17	---	R1	MALE		38 ---	Label2	Right	2	5262.4632
18	---	R2	FEMALE		25 ---	Label1	Left		
19	---	R2	FEMALE		25 ---	Label2	Right	2	3024.852
20									

- **Full survey response**

The option *Full survey response* is similar to the option above, but saves only one .txt file for the entire analysis.

#	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	STUDY	RESPONDENT	GENDER	AGE	GROUP	LABELID_Dilemma1_Choice	Question1.LABELVALUE_Dilemma1_Choice	LABELID_Dilemma2_Choice	Question1.LABELVALUE_Dilemma2_Choice	LABELID_Dilemma3_Choice	Question1.LABELVALUE_Dilemma3_Choice	Question1 "Food choice"		
2	---	R1	MALE	38	---	Right	2		Left	1	Right	2		
3	---	R2	FEMALE	25	---	Right	2		Right	2	Right	2		
4														

- **Survey statistics**

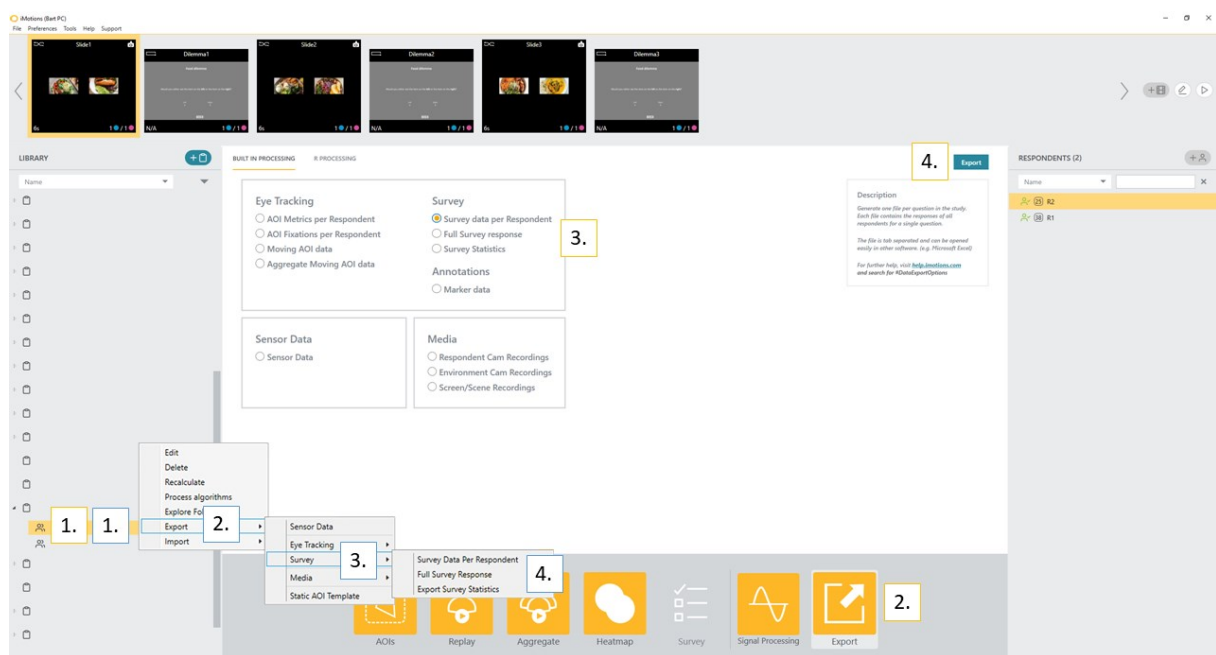

The option *Survey statistics* saves a .txt file with statistics, summarizing the respondents' answers to the questions: the mean, median, standard deviation, and count. These statistics are relevant, for instance, for questions answered through scales.

	A	B	C	D	E	F	G
1	Stimulus Name	Question ID	Question Text	Average	Median	StdDev	Count
2	Dilemma1	Choice	Food choice		2	2	0
3	Dilemma2	Choice	Food choice	1.5	1.5	0.71	2
4	Dilemma3	Choice	Food choice	2	2	0	2
5							

Important: these export-files are retrieved *at the level of the analysis*, which also means that they only consider the respondents and slides *included in the analysis*. Hence, to export the survey data of all respondents and slides, it is important to first create a 'master-analysis' (including all respondents/all slides) before exporting the survey data.

How to export the files?

The survey data export-files are available at the analysis level and are exported from the 'Export' menu (Tab: Built in processing).

In order to export survey data (yellow path)

1. Click the name of the analysis in the Library
2. Click the 'Export' button in the analysis menu.
3. Select the option 'Survey data per respondent', 'Full survey response', or 'Survey statistics'
4. Click the blue 'Export' button in the top-right corner, and choose the desired folder for saving.

Alternatively (blue path)

1. Right-click the name of the analysis in the Library
2. Choose 'Export'
3. Choose 'Survey'
4. Choose 'Survey data per respondent', 'Full survey response', or 'Survey statistics', and navigate to the desired folder for saving.

If you now explore the folder, you should find a separate .txt file for every survey slide included in the analysis (*Survey data per respondent*), a single .txt file named 'MERGED_SURVEY_RESPONSE_MATRIX.txt' (*Full survey response*) and/or a single .txt file named 'SurveyStatistics.txt' (*Survey statistics*).

This file can then be opened in Excel (more information about exporting data to Excel is [available here](#)).
