Standard Methodologies: Static Image Testing

iMotions Study Template

Static Image Testing

Potential Business Objectives

- Determine which imagery to bring to market, and which designs may be eliminated
- Evaluate how well the stimulus is noticed in a specific context, and what stimuli may go ignored
- Identify what stimulus elements (e.g., key messaging) get noticed by consumers
- Understand what stimulus elements connect with consumers emotionally, and which may not

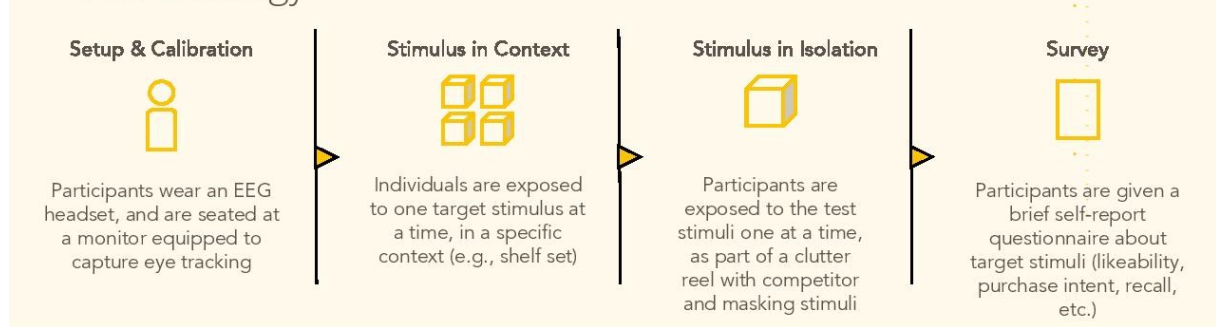

Modalities

-  Eye Tracking (ET)
-  Electroencephalography (EEG)
-  Self Report

Sample Specs

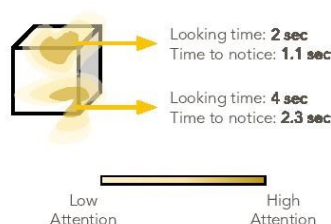

- $N = 25$ per cell
- Gender split based on target demographics
- 100% right-handed (for EEG)
- Psychographic criteria TBD by client & iMotions
