Neuroelectrics Enobio: Lab streaming Layer

How to operate?

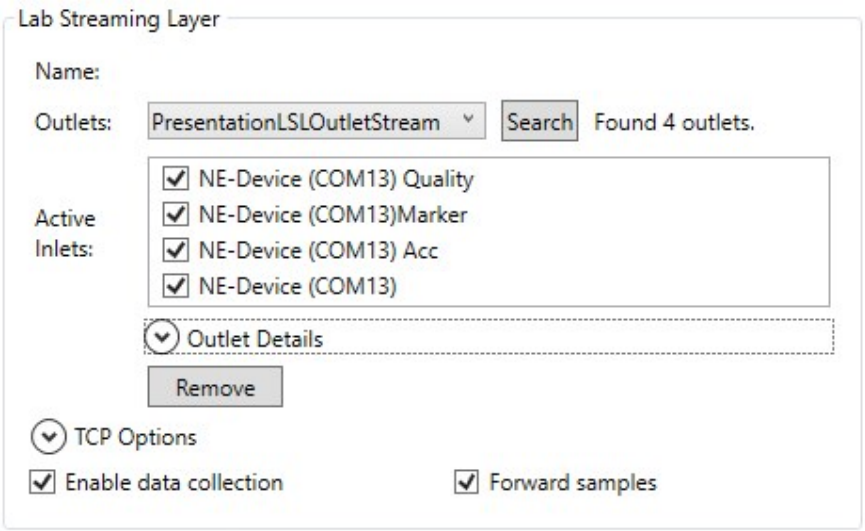

Lab streaming layer is a universal system for synchronizing streaming data for live analysis or recording. LSL is a good way to send your EEG hardware stream to applications that can record or manipulate the data, such as iMotions or Matlab.

LSL is currently being used for enabling Neuroelectrics EEG device. The following method shows you how to enable the settings in iMotions.

Setup Global Settings

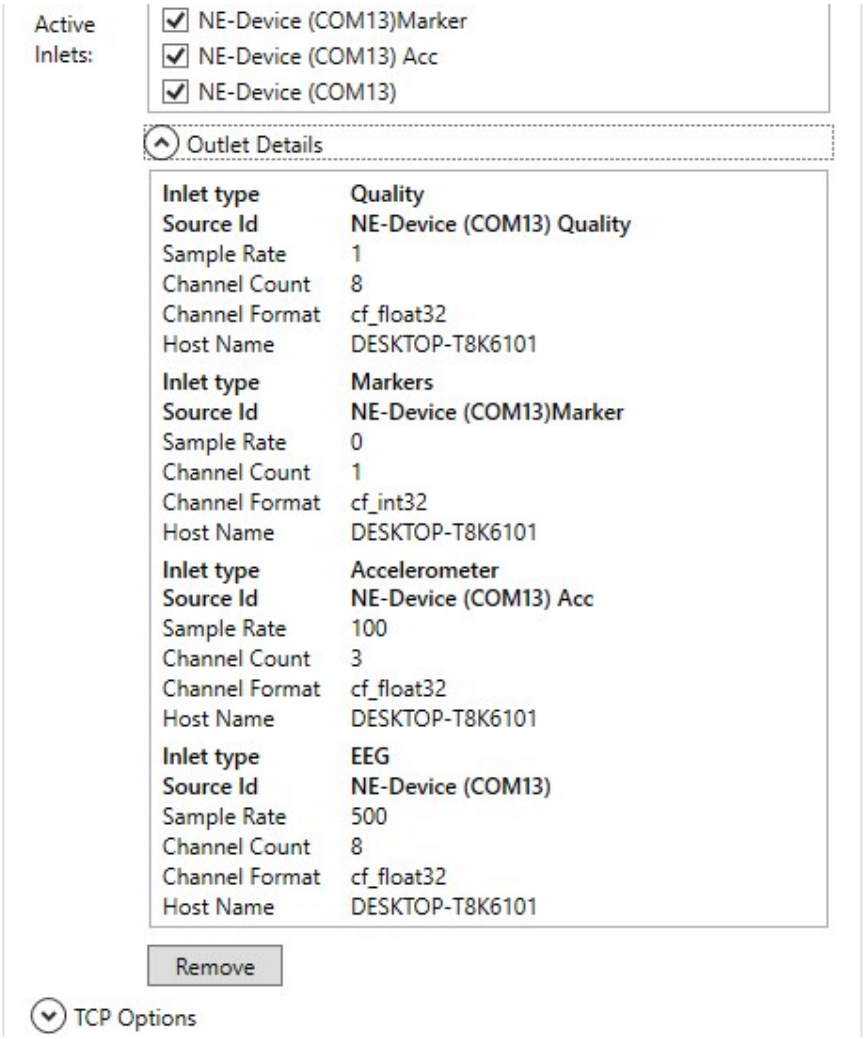

Click Preferences --> Click on Sensor settings --> and locate Lab Streaming Layer

Search for outlets on Lab Streaming Layer. Enable/disable the channels you want.

?If you want, review outlet details (these settings can't be changed in iMotions), by expanding the "Outlet Details"
