RDC Testing With Qualtrics Survey

Introduction

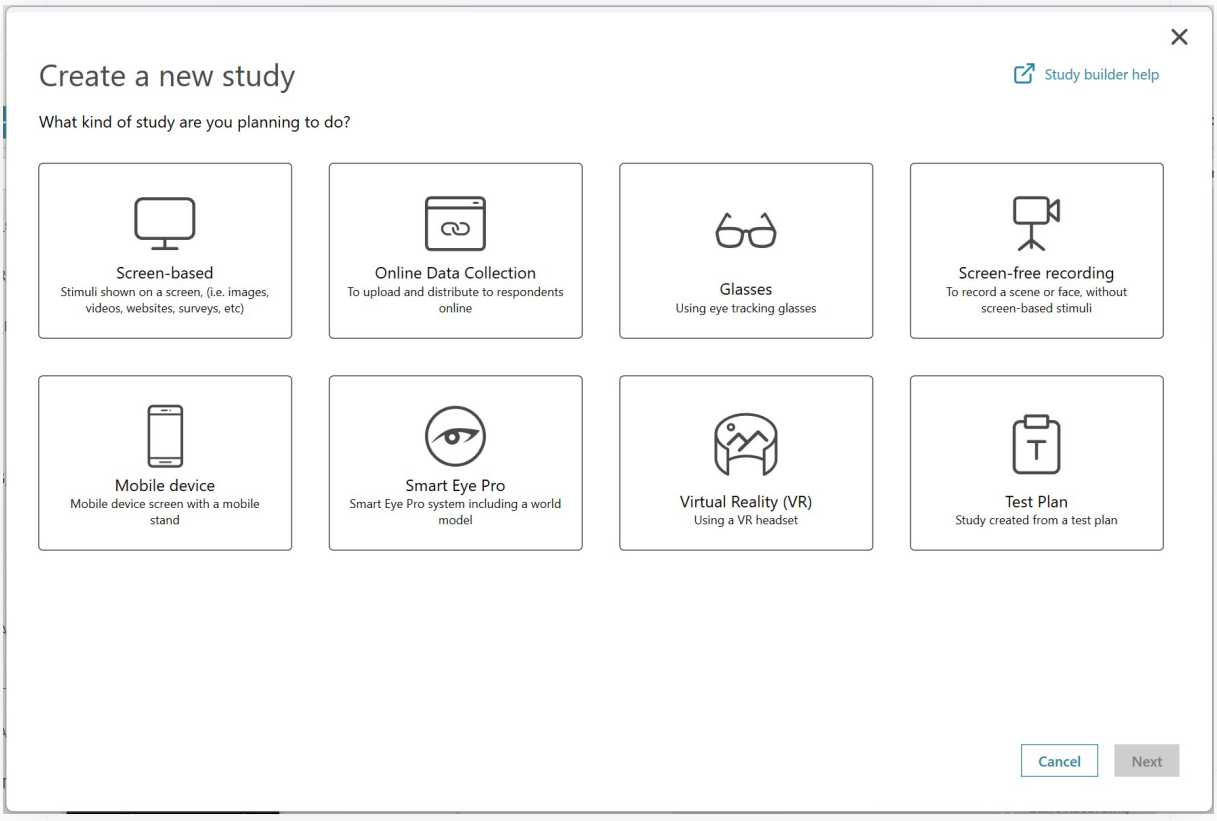

If you want to collect survey/questionnaire data with your RDC study using Qualtrics, there are some critically important steps that you must take in order to:

1. Have a seamless, uninterrupted flow to your study.
2. Be able to have the necessary information to aggregate your survey data and your sensor data (i.e., facial expression metrics) post remote data collection.

In this help center article, we will provide some guidance on how to add a Qualtrics stimulus item into your iMotions online study and how to set up your Qualtrics survey to work well with iMotions RDC.

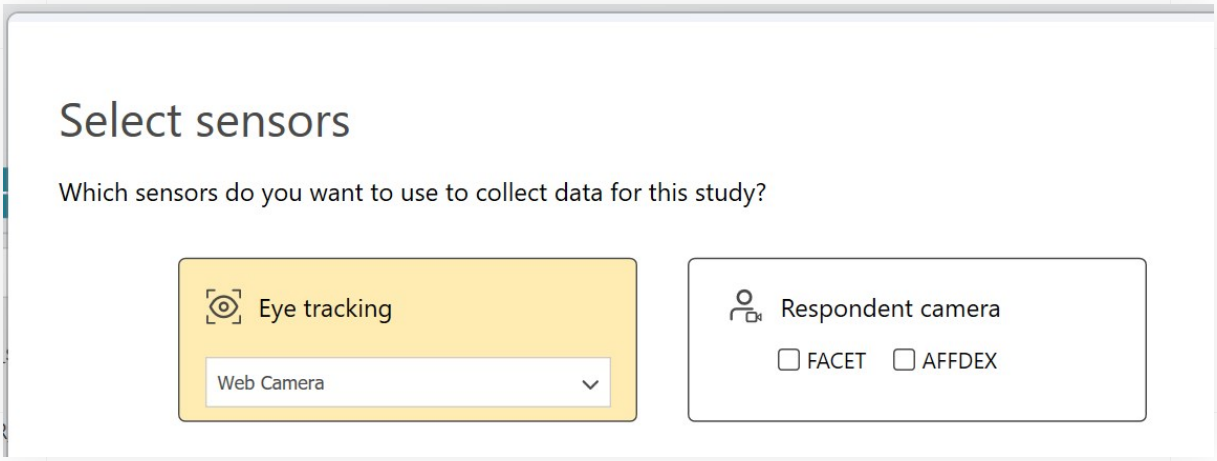

Creating a new study

To add a new RDC study, navigate to your iMotions desktop software and hit the blue clipboard button next to "Library" (or press CTRL+N). Once you have done this, the following dialog will appear.

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

Select "remote data collection" (shown with the now-deprecated language of "online data collection" in the image above). Press Next.

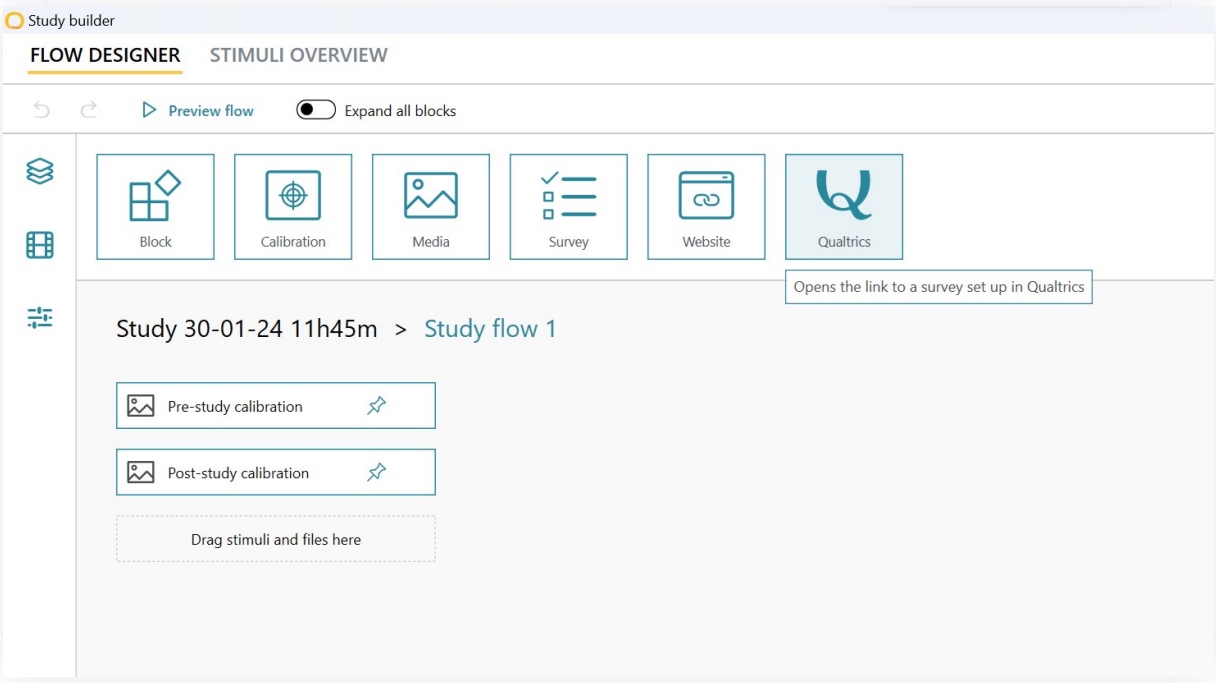

Select the relevant sensors that you would like to employ in your study. Press Next.

You then have the option to name your study, and to add any notes. Press Create Study.

For test plan studies, please refer to RDC Using Test Plans.

Adding Qualtrics survey to your study

To add stimuli to your new study, click on "Edit stimuli" in the top right. The following dialog will appear:

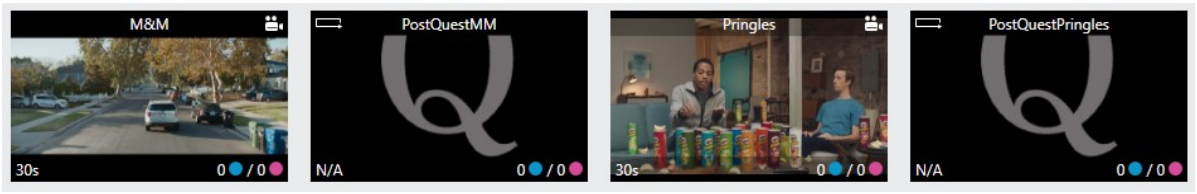

Click and drag the Qualtrics icon over to your study flow (between the pre- and post-study calibration components).

Once you have added the Qualtrics stimulus item, a new window will pop up for you to copy and paste your Qualtrics distribution URL into the *Qualtrics Survey URL* input section.

Once the component has been added, the option to adjust relevant elements will appear on the left-hand side of the screen. It's possible to provide a unique *Display Name* as this information can be utilized for tracking and data integration purposes post remote data collection. It's also possible to edit the display order, the form of stimulus advancement, the duration, and more. From here it's also possible to test the Qualtrics link.

NOTE: If you are using the same Qualtrics survey multiple times in the same RDC study, provide unique Display Names for every instance you are using that survey that would allow you to differentiate collected responses. Using the example below, the same Qualtrics survey is used to query participants' opinions after watching an ad (M&M and Pringles ads). In order to differentiate the survey responses in the Qualtrics data output, a unique Display Name is provided for each Qualtrics survey by including the name of the ad so that participant responses can be easily attributed back to the relevant video/image/website experience prior to the survey.

Setting up Qualtrics survey to use with iMotions RDC

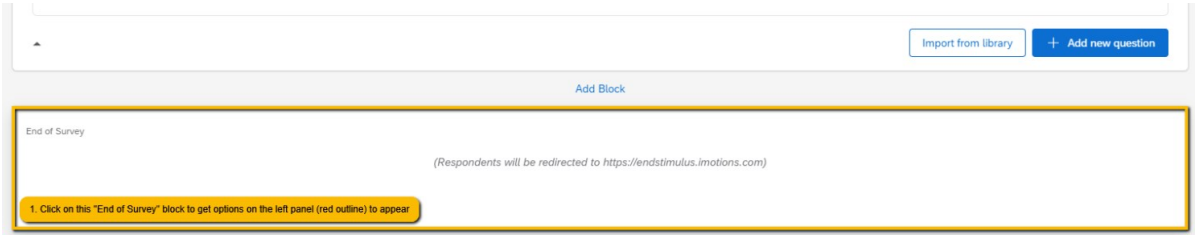

There are two sections in your Qualtrics survey that you must set up prior to using it with iMotions RDC.

Custom redirect link

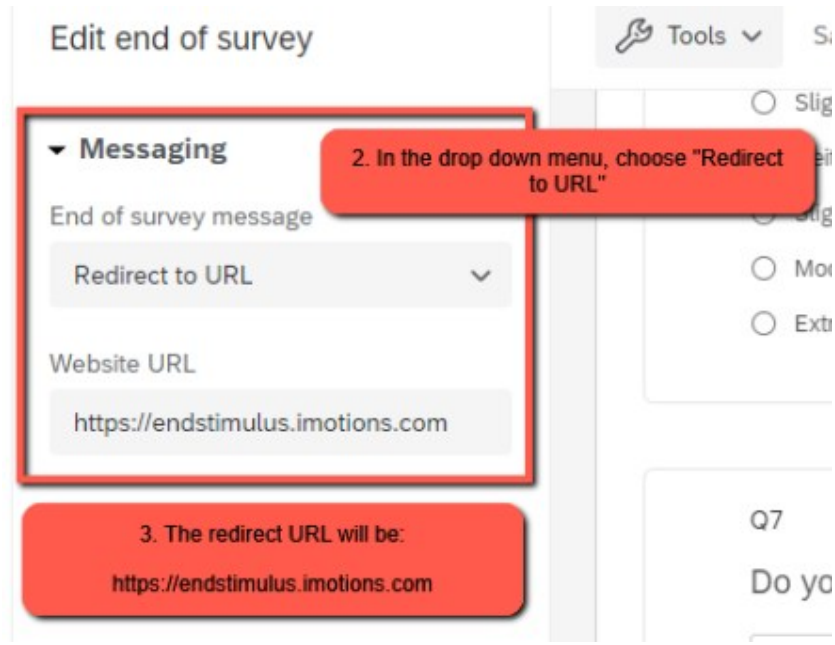

Qualtrics surveys are external websites that participants are being redirected to from iMotions RDC. In order to ensure that participants are sent back into the iMotions platform to continue with the remainder of the study, you must first set up your Qualtrics survey to automatically redirect participants once the survey has been submitted.

1. Scroll to the bottom of your survey set up to see the "End of Survey" block -- click on it to activate the settings for this feature.

2. Follow the instructions steps 2 & 3 in the graphics below to redirect participants to https://endstimulus.imotions.com upon completion of your survey to bring them back into the iMotions RDC flow.

Saving Respondent/Study Info from iMotions

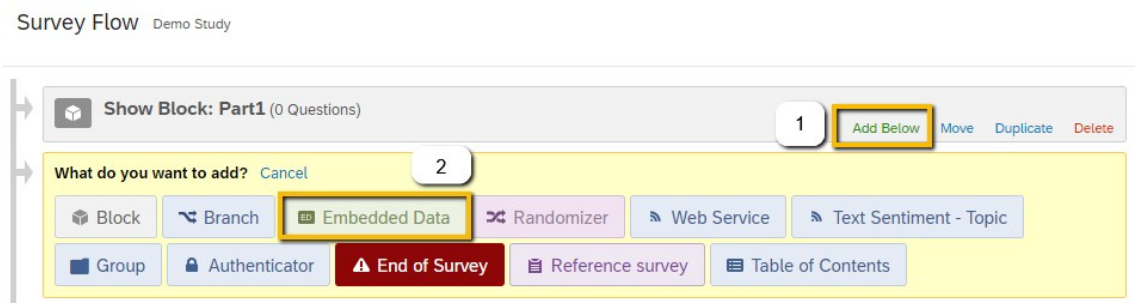

In order for you to relate survey responses back to participants who were completing your study using iMotions RDC, you will need to set up Qualtrics to receive and store study-specific and respondent-specific information from iMotions.

1. Open *Survey Flow*.

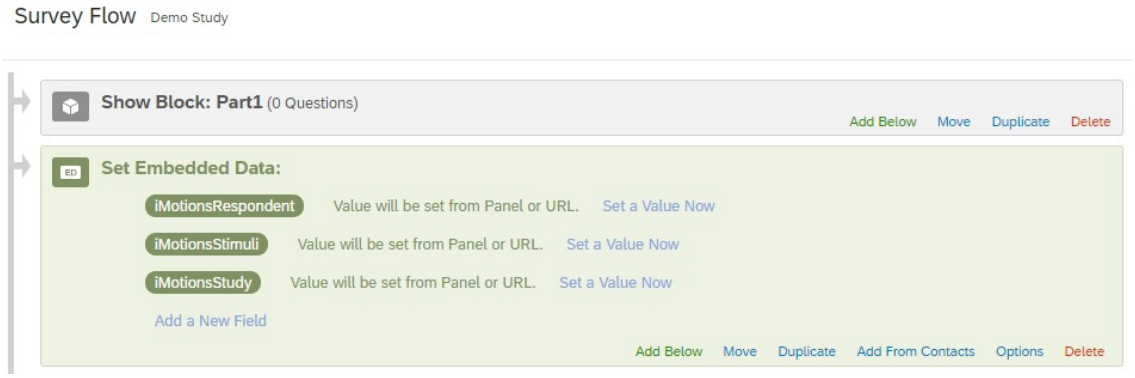

2. Select *Add Below* and choose *Embedded Data*.

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

3. Select *Add a New Field* and create 3 embedded data fields, verbatim:

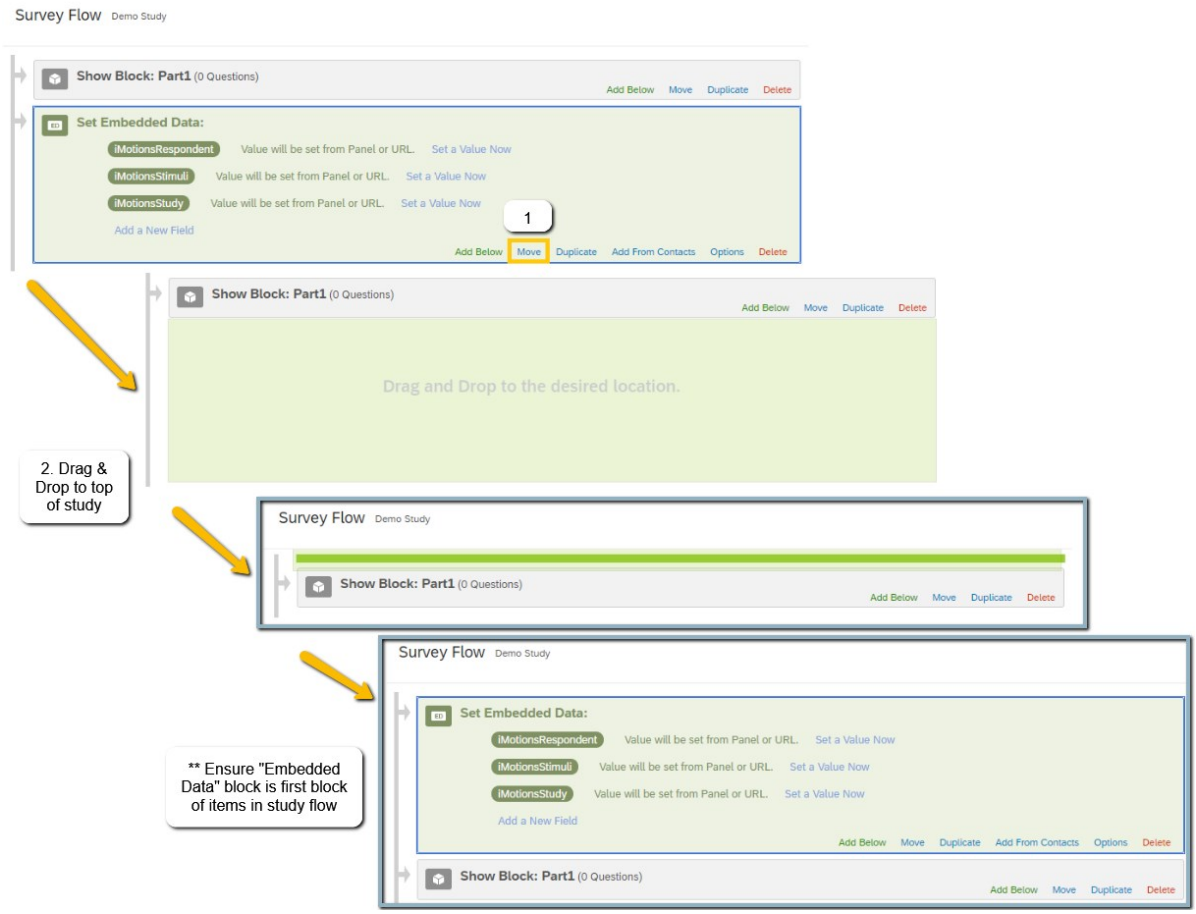

iMotionsRespondent, iMotionsStudy, iMotionsStimuli

4. Select *Save Flow* to save your edits.

NOTE: As a good practice, ensure that all Embedded Data blocks be the first block under your Study Flow in Qualtrics. This ensures that the Embedded Data are available for you to use in your study as *Piped Text*. To do so, select *Move* and drag & drop the Embedded Data block to the top.
