iMotions Online Study Setup

This article covers the steps needed to carry out your first study with iMotions Online.

Log in to my.imotions.com

1. Navigate to my.imotions.com in your web browser.

2. Log in with your email and password.
    a. Log-in/access should be available via a "Welcome" email from iMotions (set up with the link in the email).
    b. If you can not log in to my.iMotions.com or access iMotions Online, contact your Customer Success Manager.
3. After logging in, navigate to the Studies page (and other available pages).

Creating Studies with iMotions Online

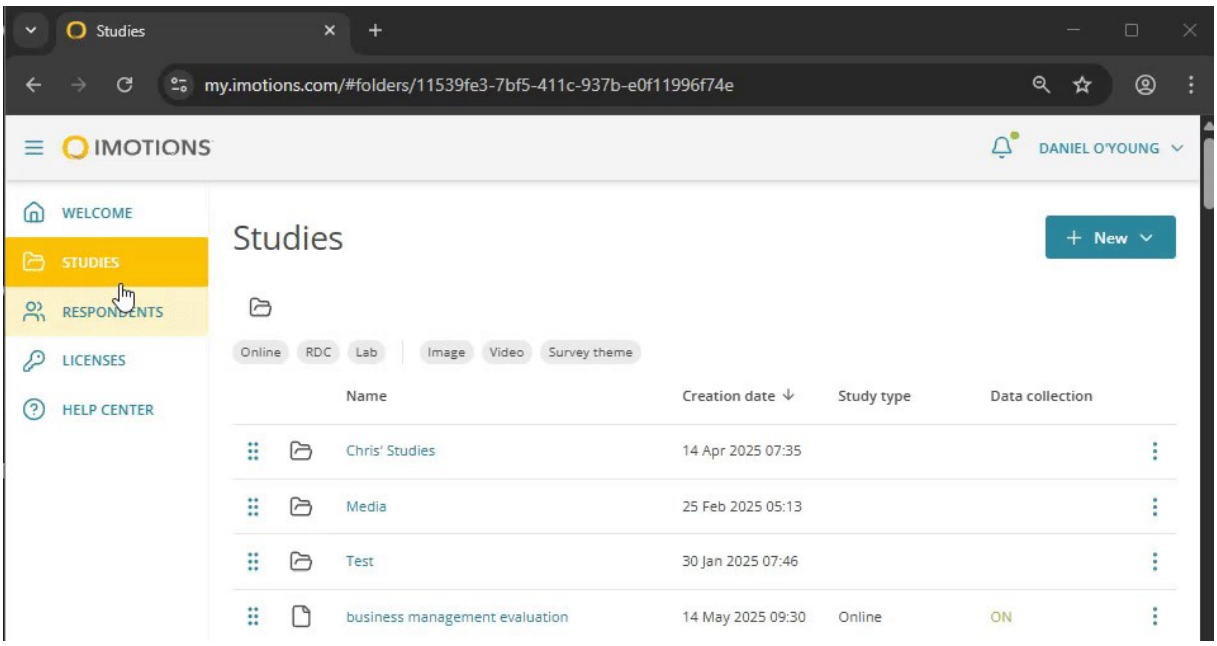

iMotions Online studies are created from the Studies page. Once a study is created, you can begin adding stimuli and design your study in the Study Builder.

How to Create a New Study

1. Navigate to the Studies page.

2. Click New and select New study.
3. Name your study then click Create study.
4. Creating or selecting a study will open the Overview page.

How to Add Stimuli to a Study

1. Navigate to the Study Builder for your iMotions Online Study.
   By default, iMotions Online studies include two calibration stimuli: Pre-study calibration and Post-study calibration.
2. Click +Add Stimuli and select a stimulus type.
3. Each stimulus type will involve a distinct workflow (e.g. selecting Image/Video files, website addresses, settings, etc.)
4. (Optional) Click +Add Flow to add additional stimulus flows.
5. Before proceeding to Data Collection, confirm that the all stimuli and flow have been added to the study.
   Note: The study can not be edited, once data collection has started (i.e. stimuli can not be adjusted if the study contains any respondent data).
6. Return to the Overview page and confirm information about the study stimuli and data collection status.

Data Collection with iMotions Online

Once your study is setup as needed, you can Start Data Collection and send the study link to respondents.

How to Start Data Collection

1. Navigate to the Data Collection page for the study.
2. Confirm Settings as needed (additional information below).
3. Click Start data collection and confirm when ready.
4. (Recommended) Click Preview study to view a preview and confirm the study stimuli work as expected.
5. Send the Link for the study to respondents by sharing the website address or the QR code.

Data Collection Settings

Settings are available at the bottom of the Data Collection page with descriptions and information.

- Devices - Desktop and/or Tablet
- Audio options - Audio output check (for stimuli with sound/audio)
- Visual options - Head position check, Re-check head position, Eye detection, Allow skipping after timeout
- Language options - Menu with available languages
- Personalized consent screen - User input for text to display
- Redirect options - Website address shown after study participation
- Data upload alternative - ‘back up’ option for respondent data file sharing

Accessing Collected Data

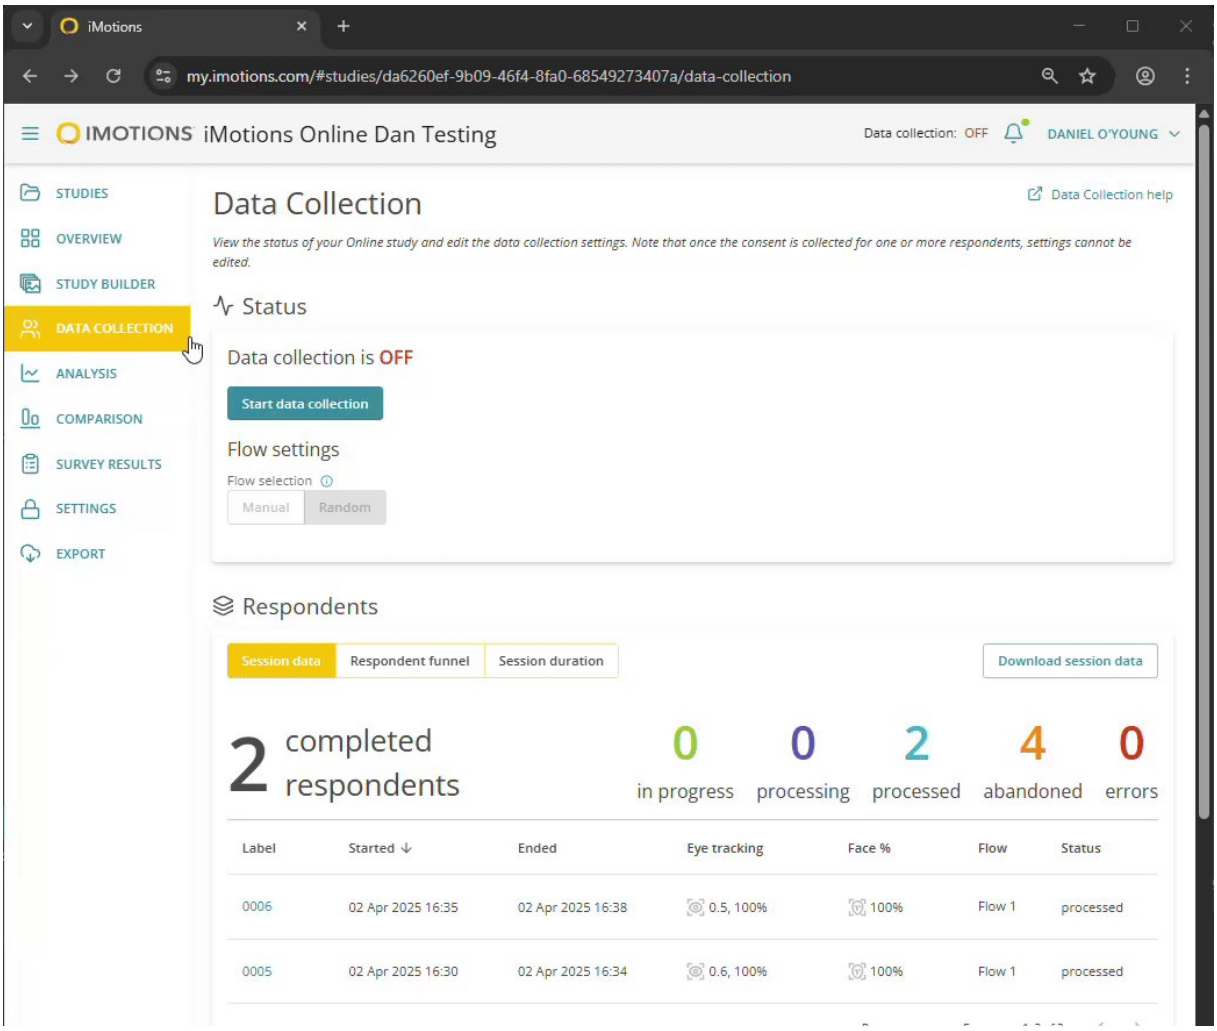

In the Data Collection page, the Respondents panel will display a list of respondents that have participated and information about their data. This list will automatically populate as respondents participate and upload their data for processing.

- Session data - List of respondent and associated information.
- Respondent funnel - Information about respondent status throughout each step of participation/data collection.
- Session duration - Information about the duration of participation.

Respondent Information (Session Data)

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

- Status: Processed - Data is available for analysis.
- Eye tracking - Data quality per respondent and stimulus.
    - Error in degrees of visual angle (dva). Smaller values indicate better eye tracking accuracy. Generally acceptable range: 0-4 dva (<1 dva = excellent data; >5 dva = unreliable data).
    - Percent of recorded vs. expected eye tracking data (i.e. eyes were detected and tracked).
- Face % - Data quality per respondent and stimulus.
    - Percent of recorded vs. expected facial expression data (i.e. face was detected and analyzed).
- Download Session Data - Download a file containing Session Data.

Analyze Collected Data

Subsequent analysis can be done from the Analysis, Comparison, Survey Results, and Export pages. Please refer to information provided on those iMotions Online pages or associated/linked Help Center article:

- Analysis - Review Respondents recordings and data.

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

- Survey results - Review survey responses.
- Comparisons - Compare results between Respondent groups or Stimuli.
- Export - Download data files and visualizations
