Data Collection Overview

This article provides an overview of data collection in iMotions.

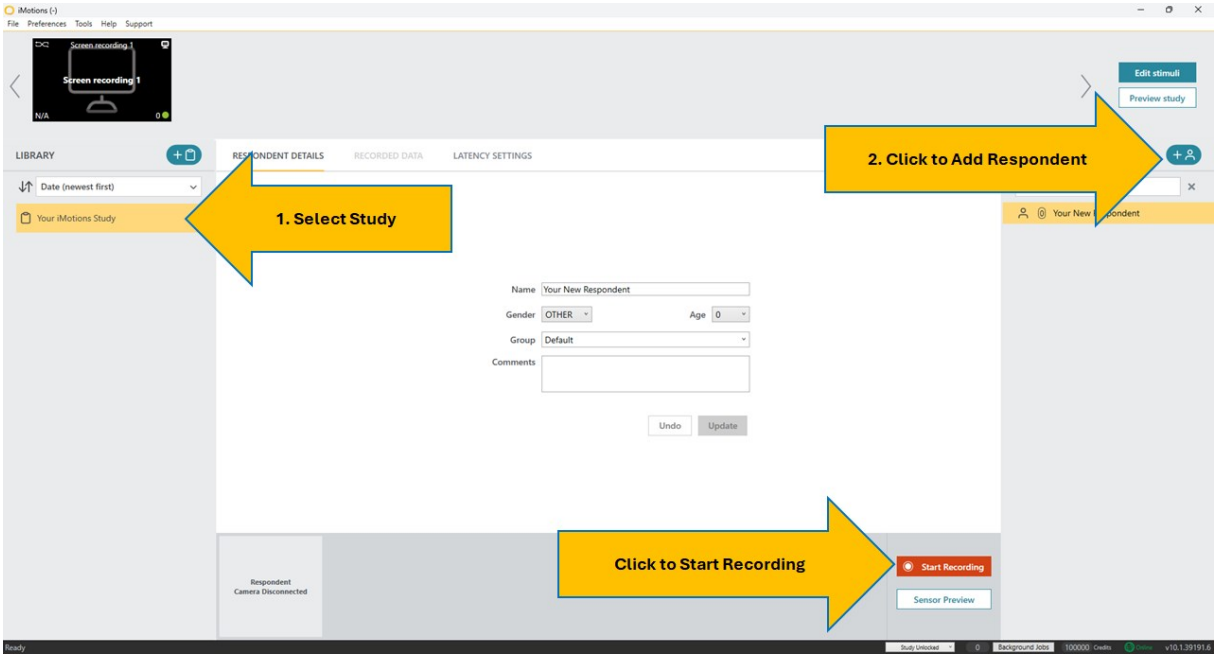

Collecting Data in iMotions

You can begin recording data from a study selected from your iMotions Study Library (after creating a study Using the iMotions Study Builder)

Steps to Start Recording

1. Select study.
2. Click Add Respondent button.
    - Respondent Details can be adjusted at any time
    - Respondent Details can be used in subsequent analysis
3. Click Start Recording
    - Before/during data collection, we recommend using the Sensor Widgets and Sensor Preview Window to confirm/monitor sensor connection and data stream.
    - For Screen-Based Eye Tracking:
        - The eye tracker widget indicates whether eyes are detected
        - Gaze data appears in the sensor preview after Eye Tracking Calibration (at the start of data collection).
        - Recommendation: Confirm respondents are ready for calibration.
4. Create Live Markers (as needed).
