# Export: Annotations

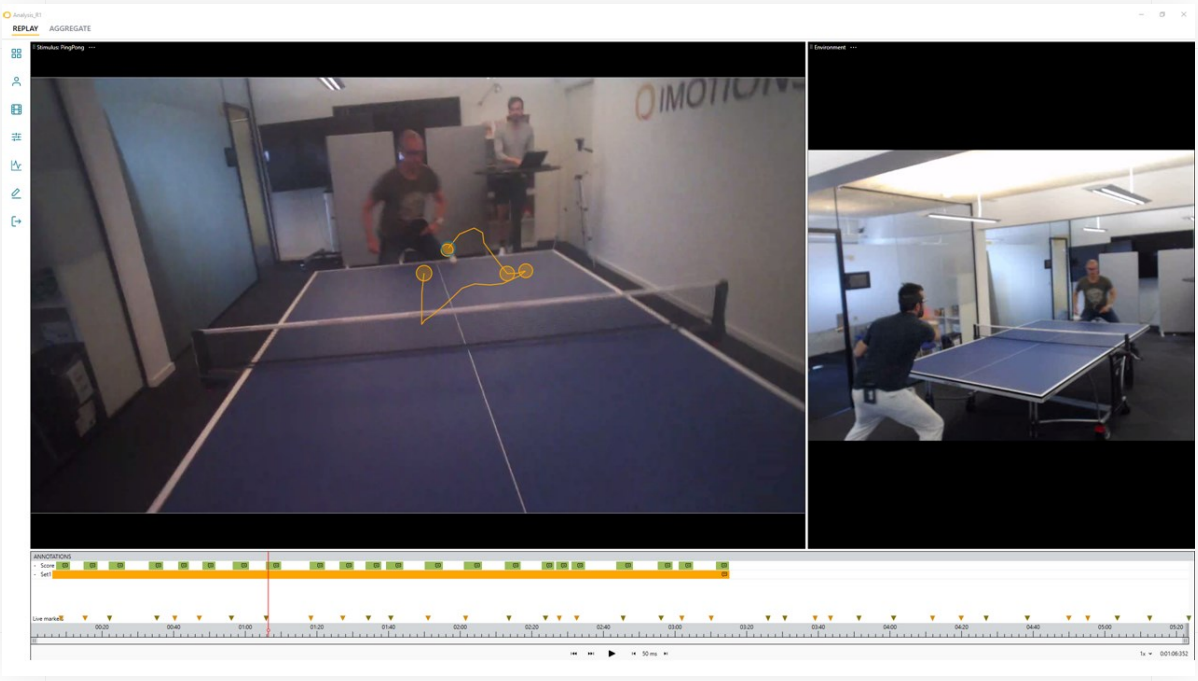

*This help center article explains how to export (a list of) annotations. Note that it is also possible to export annotations as part of the sensor data export or as part of the export-files generated by R-Notebooks.*

In this help center article:

- What are annotations?
- How to export a list of annotations
    - Individual marker data
    - Aggregate marker data
- Other options

## What are annotations?

The annotations tool is an analysis tool that exists in the Replay menu of the iMotions software. The tool is as simple as it is essential: it allows for annotating the important moments in a data collection.

For instance: in the example above, the orange annotation marks the duration of the first set in a table tennis game, while the green annotations mark the duration of the separate points played.

# How to export a list of annotations

The annotations can be exported in various ways. Here, we explain how to export a simple list of annotations.

This option always saves two files, listing the annotations placed as part of the analysis.

- Individual marker data

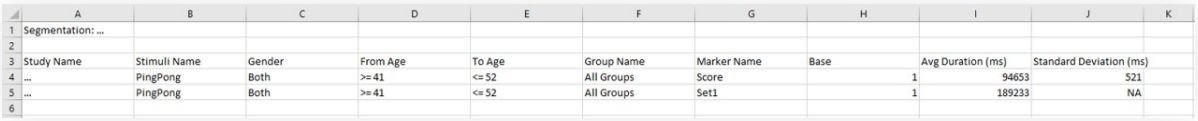

The export-file ‘Individual Marker Data.txt’ lists, for every respondent, the *start time* (i.e., relative to stimulus onset), *end time* (i.e., relative to stimulus onset) and *duration* of the annotations.

| | A | B | C | D | E | F | G | H | I | J | K | L |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | Segmentation: ... | | | | | | | | | | | |
| 2 | | | | | | | | | | | | |
| 3 | Study Name | Stimulus Name | Respondent Name | Gender | Age | Group | Marker Name | Start Time(ms) | End Time(ms) | Duration(ms) | Annotation | Color |

| 27 | | | | | | | | | | | | |

- Aggregate marker data

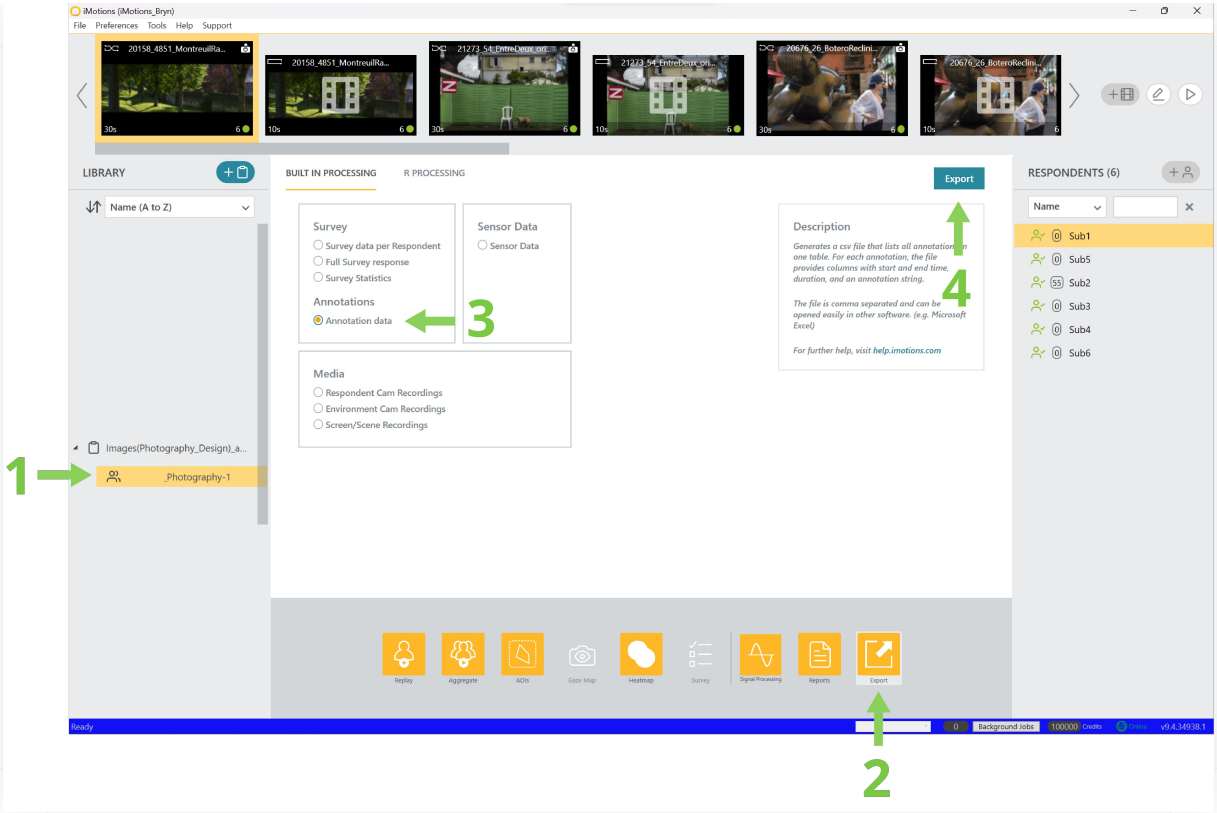

The export-file ‘Aggregate Marker Result.txt’ lists the *average duration* and *standard deviation (of the duration)* of the annotations (i.e., across the respondents included in the analysis).

| | A | B | C | D | E | F | G | H | I | J | K |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | Segmentation: ... | | | | | | | | | | |
| 2 | | | | | | | | | | | |
| 3 | Study Name | Stimuli Name | Gender | From Age | To Age | Group Name | Marker Name | Base | Avg Duration (ms) | Standard Deviation (ms) | |
| 4 | ... | PingPong | Both | >= 41 | <= 52 | All Groups | Score | 1 | 94653 | 521 | |
| 5 | ... | PingPong | Both | >= 41 | <= 52 | All Groups | Set1 | 1 | 189233 | NA | |
| 6 | | | | | | | | | | | |

These two export files are both exported from the 'Export' menu at the level of the analysis (Tab: Built in processing).

To export the annotations (yellow path)

1. Click the name of the analysis in the Library
2. Click the ‘Export’ button in the analysis menu.
3. Select the option ‘Annotation data’
4. Click the blue ‘Export’ button in the top-right corner, and choose the desired folder for saving.

If you now explore the folder, you should find two .csv files named ‘Individual Annotation Data.csv’ and ‘Aggregate Annotation Result.csv’, respectively.

## Other options

Note that it is also possible to export annotations as part of the sensor data export or as part of the export files generated by R-Notebooks.
