Export: Images and Videos from Replays

This articles describes how to export videos or images directly from the replay and aggregate replay window. This will allow you to create and customize videos as well as images including your data streams, stimuli, and media recording as reflected in the the replay and aggregate view.

1. Choose the replay window:

Once you have created an analysis, decide whether you want to export your window/image:

- from a single respondents per stimulus , then chose the respondent and click Replay
- from across a group of respondents per stimulus, then click Aggregate

and click Edit replay

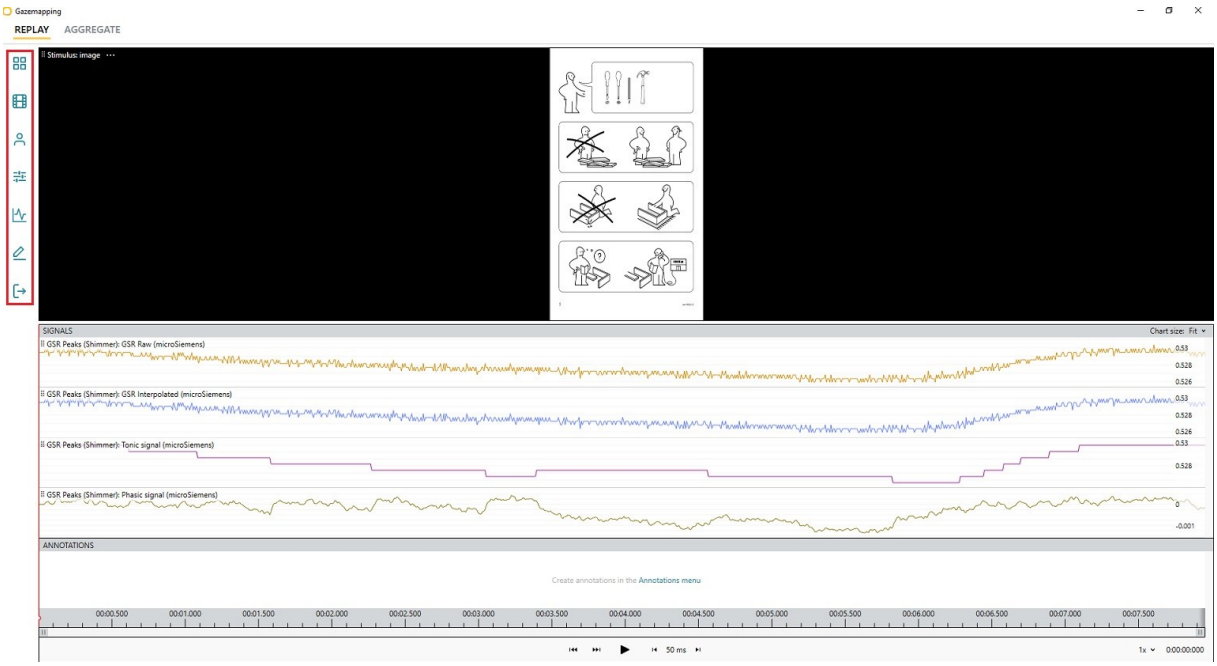

2. Configure your replay

On the left side, there is the menu that allows you to choose and configure the replay. This hence will reflect how your video/image will look like:

1. Interface option
2. Stimulus

3. Respondent (for Replay)
4. Visualizations (for eye tracking and mouse data)
5. Signals
6. Annotations
7. Export

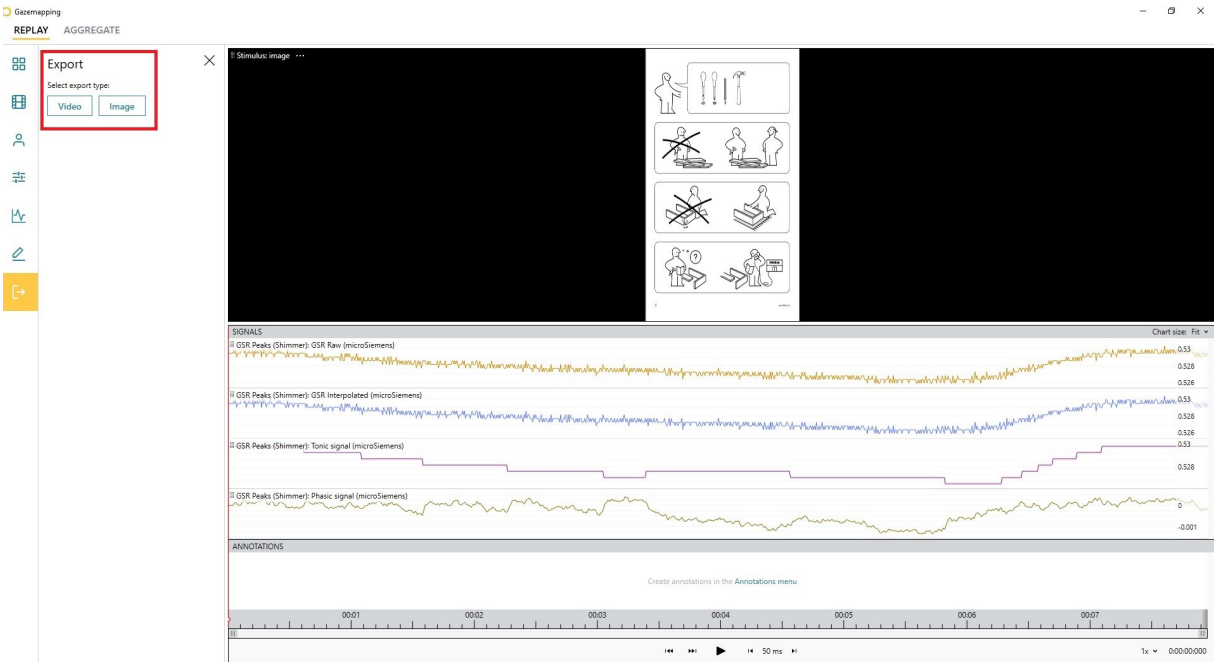

For more information on how to configure your replay, please view the following article:

Customize replay window and data graphs (8.1)

3. Export

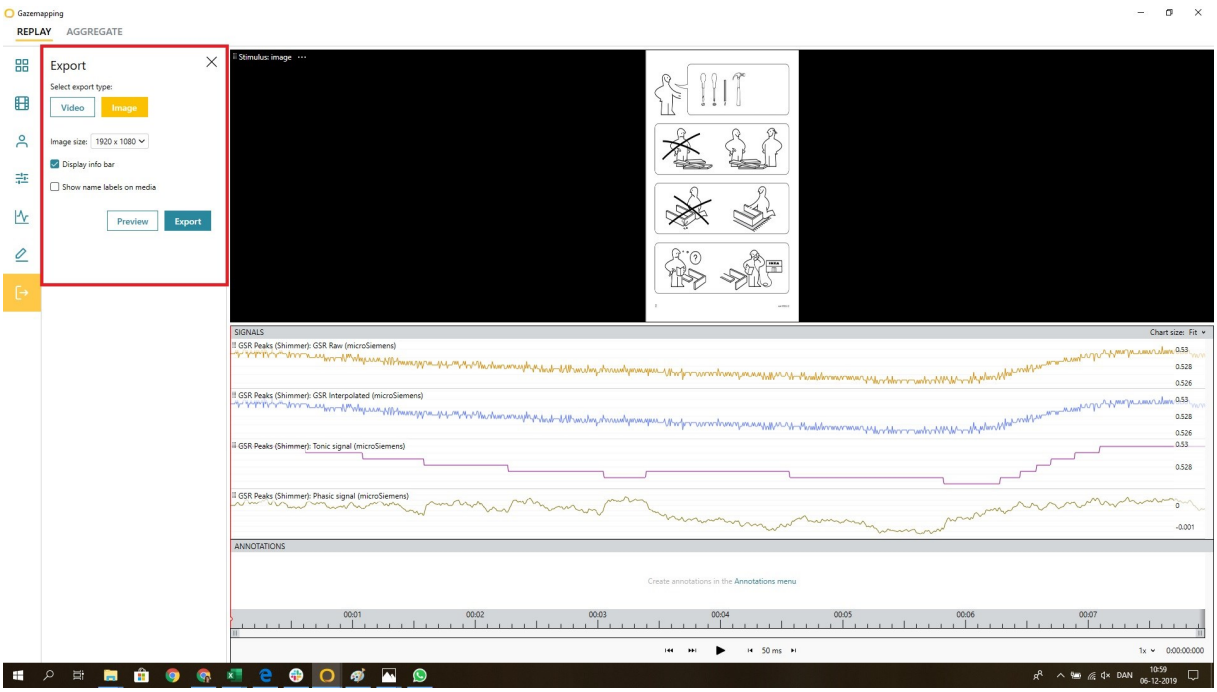

Once you have configured your replay/aggregate replay to your liking, select the export option and choose between image or video.

4. Image

If you have chosen Image, you need to set the following options:

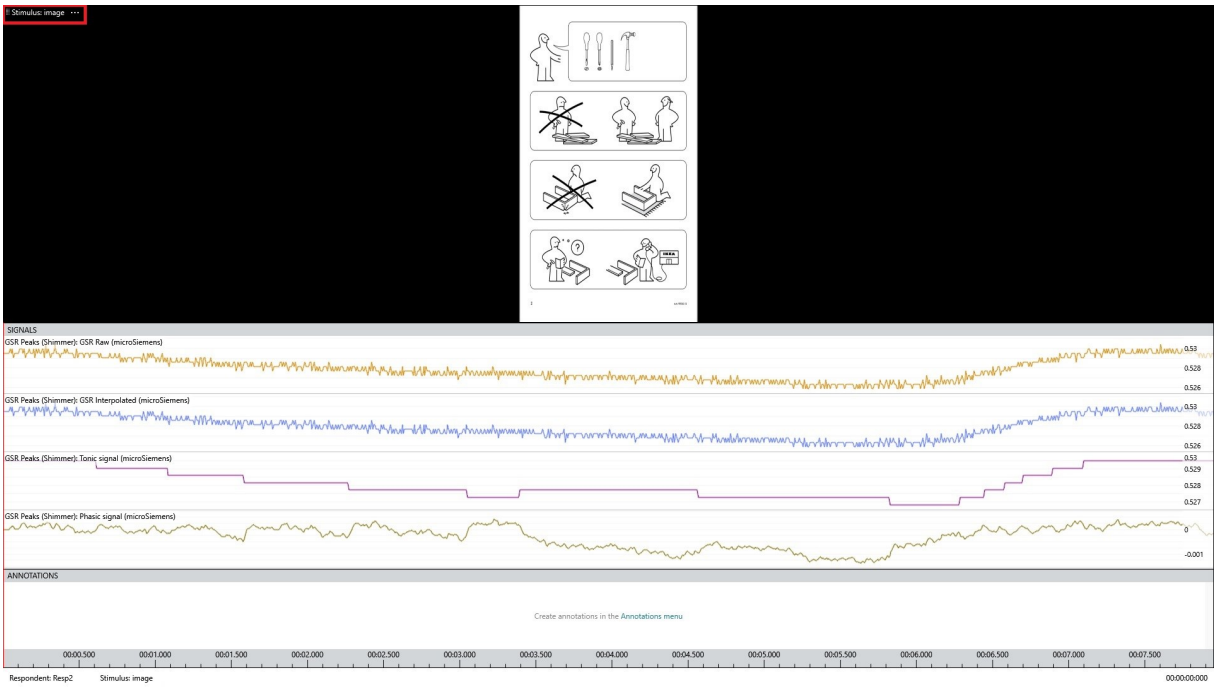

- Image size: please choose the resolution you want to export your image in from the drop down
- Display info bar: here the respondent Info and stimulus info is show in the lower left corner on the exported image (by default checked)

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

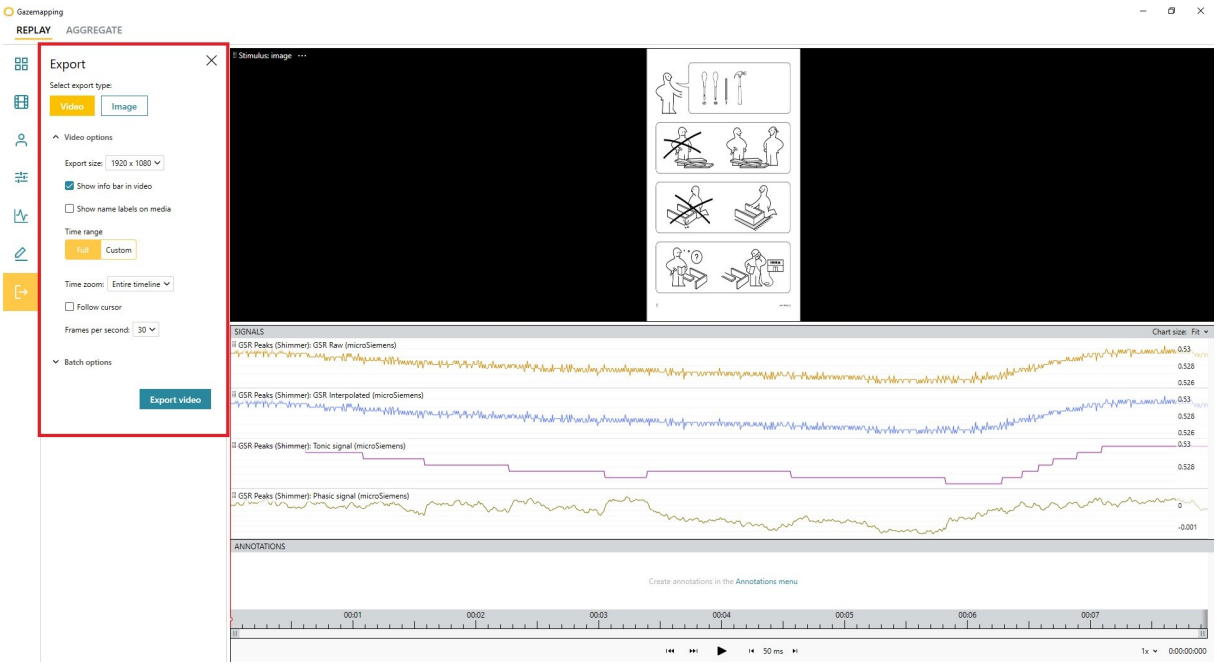

- Show name labels on media: will show the name of the stimulus or media in the replay window (by default not checked)

5. Video

If you have chosen Video, the video option panel will expand:

Confidential © 2023 Redistribution is not permitted without written permission from iMotions

- Export Size: there you can choose the Export size of your video
- Infobar: to include info bar in video (by default yes)
- Labels: to include name labels on video (by default no)
- Timeline: to show the full time line or custom time line (only parts of the time line)
    - If you have chosen the Full time line, you can now choose the Time Zoom which allows you to choose how much of the time line is shown at once
    - If you have chosen the Custom time line, either
        - input the start and the end of the time window in relation to the time line
        - adjust and move the time window on the data graphs by hovering over the yellow edges and moving them to the desired starting and end point.
- Time Zoom: choose the Time Zoom as needed
    - the time zoom shows you either the entire time line at once (if not defined otherwise)
    - or just a portion at once for a specific time (10 sec, 20 sec, ...)
- Cursor: choose to have the cursor
    - to be centered (as a point of reference) as by default
    - have the cursor move with the replay by clicking Follow cursor
- Frames per Second: choose with which framerate you would like to export your video via the drop down (highest frame rate shown by default)
- Batch Option: if you are in the single respondent replay, you have the
