Export: Keyboard and Mouse Events

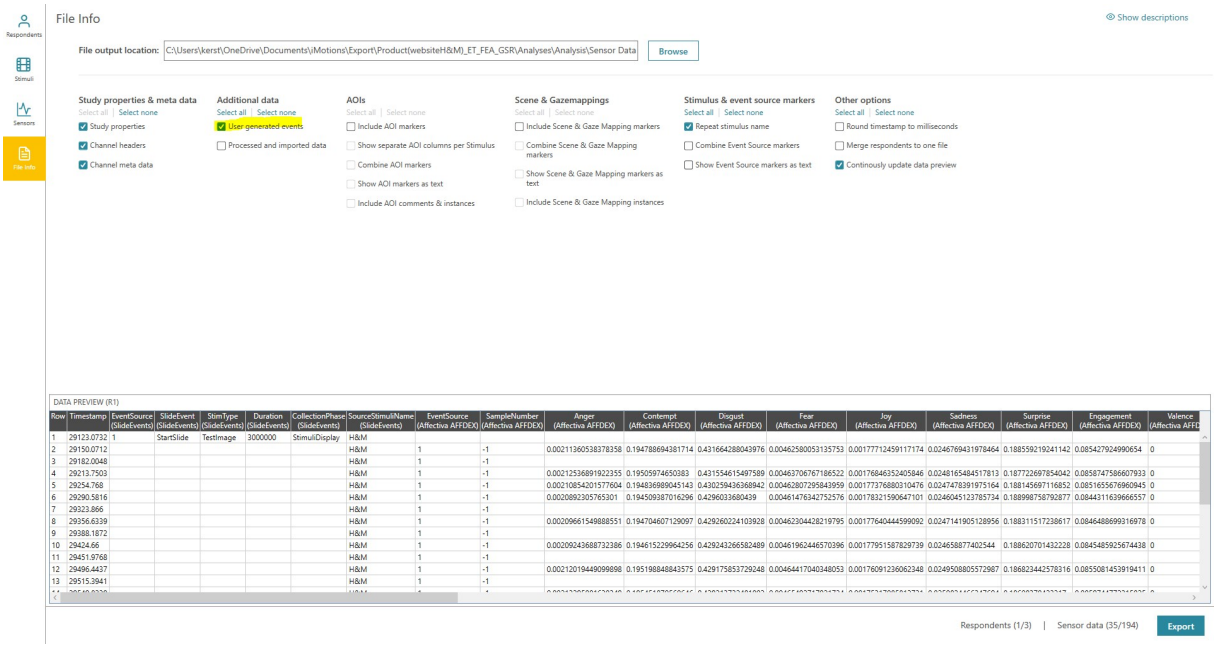

To export keyboard and mouse events first select sensor data in Exports

Then press the export button at the bottom right:

Finally, check the “User generated events” in the Export Sensor box. Click Export at the bottom.

In the data output file look for the column that includes:

UserInputEvents (iMotions)
InputEvent
Input source i.e. Mouse or API

Comment:

- If you are interested in Mouse Clicking events, you need to filter for either the "button down" and "button up" events, because a click always starts with pressing the left or right mouse key, and ends with releasing it.
- Even if you only wish to export Events, you always need to include at least one signal
